Why MicroCenter eVMS ??

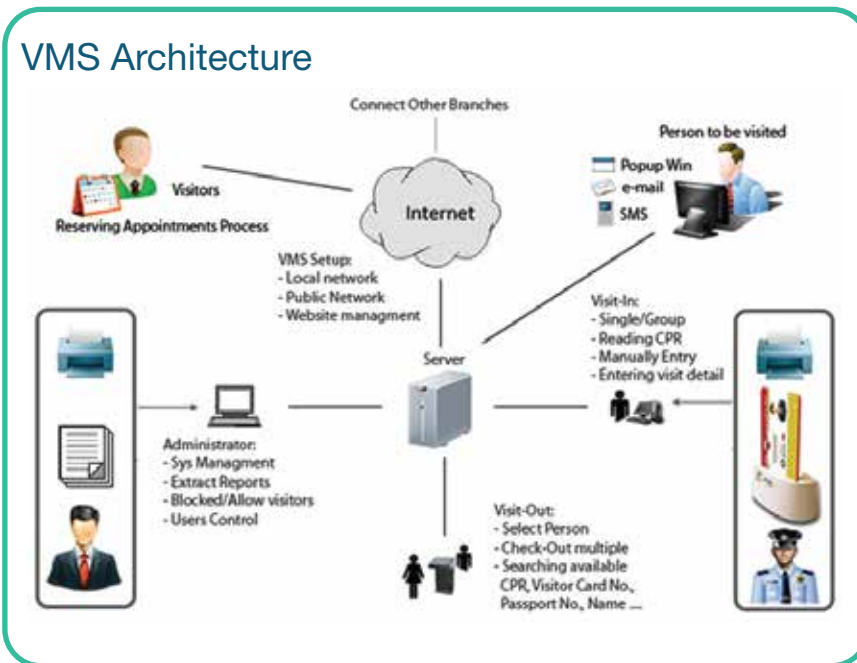

In many facilities, visitors are still registered using a handwritten paper log. While this method is perceived as quick and easy, it provides virtually no security and leaves visitor information available for anyone to see. Automated visitor management solutions lend a more professional appearance, enhance security and meet compliance mandates for the collection and auditing of visitor data.

MicroCenter eVMS allows organizations to automate the entire process of registering a visitor, printing a badge and capturing detailed information in seconds by simply reading all smart identity cards compatible for GCC, all Passports and Business Cards.

What are the features of eVMS ??

- **Visits-in:** Reading of all Smart card identity cards compatible for GCC and Passport & Scanning of Business Cards for capturing the visitor's details and entering visits detail
- **Visit-out:** A page showing all current visitors and user can view the details of the checked in visitors.

- **Manage visitors:** The administrator can block or activate a particular visitor.
- **Visits details:** The user can filter the data depending on date, time, visited persons, visited locations etc. Receive notifications whenever a visitor arrives at your premises.
- **Reports:** with all details about visitors and visits can be generated instantly.
- **Data Sharing:** Data can be accessed across multiple locations. This helps the organization to store all details of visitors in a central repository
- **Blocking:** Blocking a Visitor from the compound

Appointment Management

- The secretary/receptionists to raise a request for appointment on behalf of the visitor to the staff/employee.
 - Visitors without prior appointments can raise a request for an appointment which would be communicated to the employee.
 - The Employee can accept, cancel & postpone the appointment according to this convenience; an email for the same action will be send to the visitor at the same time.
- Appointment Reports: All Reports related to the appointments can be generated.

Notifications

- Staff/employee will receive notifications from the system via e-mail/desktop alert or SMS.
- The notifications are sent every time the security supervisor scans the visitor's CPR card at the gate.
- When the visitor exits the organization, the staff/employee receives another notification regarding the same.
- Notifications include the Photograph and other necessary details of the visitor.

How Our Customers Find eVMS

- Simplicity – User friendly application designed in simple GUI
